ADD VANTAGE HD PLUS +

Performance 

We care about your vision, and the quality of your vision depends on the quality of your lenses. ADDvantage HD Plus digital progressive lenses with VisionAir material have been crafted with you in mind. Our lenses offer high definition performance and all day comfort to ensure you can see at your very best.

ADDvantage HD Plus lenses can also come with popular add ons to ensure even higher quality protection for your eyes and vision.

VisionAir 1.56 material provides your eye doctor the ability to offer **amazing clarity with thinner, lighter lenses**. VisionAir 1.56 allows them to accommodate a wider prescription range without the concern for thick, bulky lenses or limited frame options. It also has **built-in UV protection properties, blocking 100% of harmful UV light**.

Conversion offers a **fast and seamless shift between tinted and clear** making it the market leader in photochromic. The Conversion technology quickly changes from light to dark and back, while **blocking harmful UV rays**. Conversion is perfect for those who do not want to switch from glasses to sunglasses every time you head outdoors.

The exclusive Clarity anti-reflective coating **removes most reflections** from the front surface of your lenses, **eliminating glare and visual discomfort**. When reflections are eliminated, more light can pass through your lenses allowing for sharper vision with less distraction, especially at night.
